

# Medication

EYFS: 3.19, 3.44, 3.45, 3.46

At **Wings Nursery** we promote the good health of children attending nursery and take necessary steps to prevent the spread of infection (see sickness and illness policy). If a child requires medicine, we will obtain information about the child's needs for this, and will ensure this information is kept up to date.

We follow strict guidelines when dealing with medication of any kind in the nursery and these are set out below.

## **Medication prescribed by a doctor, dentist, nurse or pharmacist**

*(Medicines containing aspirin will only be given if prescribed by a doctor)*

- Prescription medicine will only be given when prescribed by the above and for the person named on the bottle for the dosage stated
- Medicines must be in their original containers with their instructions printed in English
- Those with parental responsibility for any child requiring prescription medication should hand over the medication to the most appropriate member of staff who will then note the details of the administration on the appropriate form and another member of staff will check these details
- Those with parental responsibility will be asked to sign a medication form detailing the time that the medication was last given and the time and dose that the Nursery are to administer. Those with parental responsibility will then be asked to sign the form at the end of the day to acknowledge the time and dose of medication that was given.
  1. Permission is only acceptable for that brand name of medication and cannot be used for similar types of medication, e.g., if the course of antibiotics changes, a new form will need to be completed
  2. The dosage on the written permission is the only dosage that will be administered. We will not give a different dose unless a new form is completed
  3. Parents must notify us IMMEDIATELY if the child's circumstances change, e.g., a dose has been given at home, or a change in strength/dose needs to be given.
- The nursery will not administer a dosage that exceeds the recommended dose on the instructions unless accompanied by written instructions from a relevant health professional such as a letter from a doctor or dentist
- The parent must be asked when the child has last been given the medication before coming to nursery; and the staff member must record this information on the medication form. Similarly, when the child is picked up, the parent or guardian must be given precise details of the times and dosage given throughout the day. The parent's signature must be obtained at both times
- At the time of administering the medicine, a senior member of staff will ask the child to take the medicine, or offer it in a manner acceptable to the child at the prescribed time and in the prescribed form. (It is important to note that staff working with children are not legally obliged to administer medication)

- If the child refuses to take the appropriate medication, then a note will be made on the form
- Where medication is “essential” or may have side effects, discussion with the parent will take place to establish the appropriate response.

### **Calpol**

At Wings Nursery our general policy is that we will NOT administer Calpol. If a child requires Calpol this generally suggests that they are unwell and should be collected from the setting by their parents or an allocated adult. There are two main exceptions to this rule. If a child has a history of convulsions especially when running a temperature, we would keep Calpol supplied by the family and administer if that child has a high temperature on the go ahead from the parents. We would once administered be contacting the parents to collect the child from the setting as soon as possible. We will also administer Calpol if a child has an injury that is causing them pain such as a broken bone or burn etc. This would be agreed with the parent and the dose and timings clearly agreed and recorded on a short term medication form.

### **Injections, pessaries, suppositories**

As the administration of injections, pessaries and suppositories represents intrusive nursing, we will not administer these without appropriate medical training for every member of staff caring for this child. This training is specific for every child and not generic. The nursery will do all it can to make any reasonable adjustments including working with parents and other professionals to arrange for appropriate health officials to train staff in administering the medication.

### **Staff medication**

All nursery staff have a responsibility to work with children only where they are fit to do so. Staff must not work with children where they are infectious or too unwell to meet children’s needs. This includes circumstances where any medication taken affects their ability to care for children, for example, where it makes a person drowsy.

If any staff member believes that their condition, including any condition caused by taking medication, is affecting their ability they must inform their line manager and seek medical advice. \*The nursery manager/person’s line manager/registered provider will decide if a staff member is fit to work, including circumstances where other staff members notice changes in behaviour suggesting a person may be under the influence of medication. This decision will include any medical advice obtained by the individual or from an occupational health assessment.

Where staff may occasionally or regularly need medication, any such medication must be kept in the person’s locker/separate locked container in the staff room or nursery room where staff may need easy access to the medication such as an asthma inhaler. In all cases it must be stored out of reach of the children. It must not be kept in the first aid box and should be labelled with the name of the member of staff.

### **Storage**

All medication for children must have the child's name clearly written on the original container and kept in a closed box, which is out of reach of all children. Emergency medication, such as inhalers and EpiPens, will be within easy reach of staff in case of an immediate need, but will remain out of children's reach. Any antibiotics requiring refrigeration must be kept in a fridge inaccessible to children.

All medications must be in their original containers, labels must be legible and not tampered with or they will not be given. All prescription medications should have the pharmacist's details and notes attached to show the dosage needed and the date the prescription was issued. This will all be checked, along with expiry dates, before staff agree to administer medication.
